

H, L, C are High, Low and Close.

For $t_f < 1$ hr, use daily values to give daily CPR

For $1 \text{ hr} \leq t_f < 1 \text{ day}$, use weekly values to give weekly CPR

For $1 \text{ day} \leq t_f < 1 \text{ week}$, use monthly values to give monthly CPR

For $1 \text{ week} \leq t_f < 1 \text{ month}$, use yearly values to give yearly CPR

- Pivot Point (P) = $(H+L+C)/3$
- Bottom Central Pivot (BC) = $(H+L)/2$
- Top Central Pivot (TC) = $2P-BC$
- $R1 = 2P-L$
- $R2 = P+H-L$
- $R3 = H+2(P-L)$
- $R4 = R3+H-L$
- $S1 = 2P-H$
- $S2 = P-(H-L)$
- $S3 = L-2(H-P)$
- $S4 = S3-(H-L)$

Narrow CPR

Daily - $R1-P < P * 0.01$ and $P-BC < \text{close} * 0.009$

Weekly - $R1-P < P * 0.025$ and $P-BC < \text{close} * 0.005$

Monthly - $R1-P < P * 0.04$ and $P-BC < \text{close} * 0.005$

Medium CPR

Daily - $R1-P < p * 0.02$ and $P-BC < \text{close} * 0.018$

Weekly - $R1-P < p * 0.05$ and $P-BC < \text{close} * 0.01$

Monthly - $R1-P < p * 0.08$ and $P-BC < \text{close} * 0.01$

Wide CPR

Otherwise

Market will be trendy for narrow CPR, and sideways for wider CPR

For narrow CPR – algo 1, For wider CPR – algo 2, for medium CPR – both algos

Zones:

Zone 1: Resistance zone - Between R1 and Prev Day High

Zone 2: Support Zone: Between S1 and Prev day low

Zone 3: Neutral zone - Between BC and TC

Algo 1: 5 min tf (daily CPR) – similar entries can be planned for 1 hr tf (weekly CPR)

Bullish Entry condition 1:

- 1. Last 5 min candle crossed and closed above Neutral zone (Resistance Zone) and candle should be bullish with minimal upper wick**
- 2. 20 min EMA > VWAP**
- 3. 5 min EMA > 20 EMA**
- 4. RSI > EMA (RSI,20)**
- 5. EMA (RSI, 20) > 45**

Target : Low of Resistance zone (R2), SL 5 min close below Neutral (Resistance Zone)

Bullish Entry condition 2: Market has already moved upside 0.5% without any entry or it has moved down and then reversed and broken an upper swing

- 1. Wait for retrace upto 20 EMA**
- 2. 20 EMA > VWAP and 20 EMA > TC and VWAP > TC**
- 3. 5 EMA > 20 EMA**
- 4. RSI > EMA (RSI,20)**
- 5. EMA (RSI, 20) > 50**

Target : upper swing, SL close below the last lower swing

Bearish Entry condition 1:

1. Last 5 min candle crossed and closed below Neutral Zone (support zone) and candle should be bearish with minimal lower wick
2. 20 min EMA < VWAP
3. 5 min EMA < 20 EMA
4. RSI < EMA (RSI,20)
5. EMA (RSI, 20)<60

Target : High of support zone (S2)), SL 5 min close above Neutral (support Zone)

Bearish Entry condition 2: Market has already moved 0.5% downside without any entry or it has moved up and then reversed and broken a down swing

1. Wait for retrace upto 20 EMA
2. 20 EMA < VWAP and 20 EMA < BC and VWAP < BC
3. 5 EMA < 20 EMA
4. RSI < EMA (RSI,20)
5. EMA (RSI, 20) < 50

Target : Lower swing, SL close above the last upper swing

Algo 2: for sideways market

Mark the price action support and resistance zones (of 10 points wide) where price has touched twice. Keep taking sell trades from resistance zone and buy trade from support zones with target of touching the opposite side zone.

RSI divergence entry

If market has been trendy and then it makes RSI divergence between two tops (or two bottoms) separated by at least 12 candles (1 hr), then we can make reversal entry with target of bottom (top) and SL close above top(bottom)
